Processing life's transactions

Pay2Link is a fast and secure solution to request payment from your client. There are many situations in which it is useful, when the customer is not physically in the store, when he does not have a mobile terminal or simply when he charges for a personalized service outside the store or website. It is easy and intuitive. A customer receiving the invoice directly on their mobile is much more likely to feel motivated to make the payment immediately.

## Why Pay2Link?

### Flexibility:

Pay2Link allows you to share the payment link by email, SMS or WhatsApp giving your customers a quick payment option.

### Convenience:

You don't need to have a web page or an integration solution at your point of sale to accept payments through Pay2Link.

### Security:

All payments generated through Pay2Link are processed by Dynamics Payments and backed by PCI DSS certification.

### Notifications:

Pay2Link will send you a notification of the transaction via email once the customer makes their payment.

### Identity and Brand:

When the customer clicks on the payment link received through email, he will be directed to the Welcome page of Pay2Link which will have the logo and identity of your company and invoice details.

### Responsive Format

You can make your links and invoices directly from the computer or mobile phone allowing you to keep the business open 24/7.

We create innovative business solutions for today's dynamic and changing environment
